# Project Title
**Pradofy Study and Productivity Tracker**

---

## Proponent(s)
**Julianne Benedict Prado - BSCS**

---

## Project Overview
The **Pradofy Study and Productivity Tracker** is a modern GUI-based application designed to help users log, monitor, and visualize their daily study sessions. It allows students to manage their productivity by recording subjects, study hours, and progress over time. Built using **Python (PyQt5, SQLite3, Matplotlib, Seaborn, and Pandas)**, the app provides an intuitive interface with real-time analytics for improved study habits and goal tracking.

---

## Features

- Add, edit, and delete study sessions
- Display total study hours and top-performing subjects
- Visualize data with bar, pie, and line charts
- Export study records to a CSV file
- Automatically calculates total hours and weekly trends
- Modern, responsive PyQt5 GUI

---

## Code Design and Structure

- **FinalStudyAndProductivityTracker.py** - contains the full program logic and GUI implementation.
- **SQLite3 database (study_sessions.db)** - automatically created to store session data.
- **Icons folder** - stores image icons (e.g., `book.png`, `add-time.png`, etc.) used in buttons and headers.
- **study_sessions_export.csv** - generated when the user exports study data.

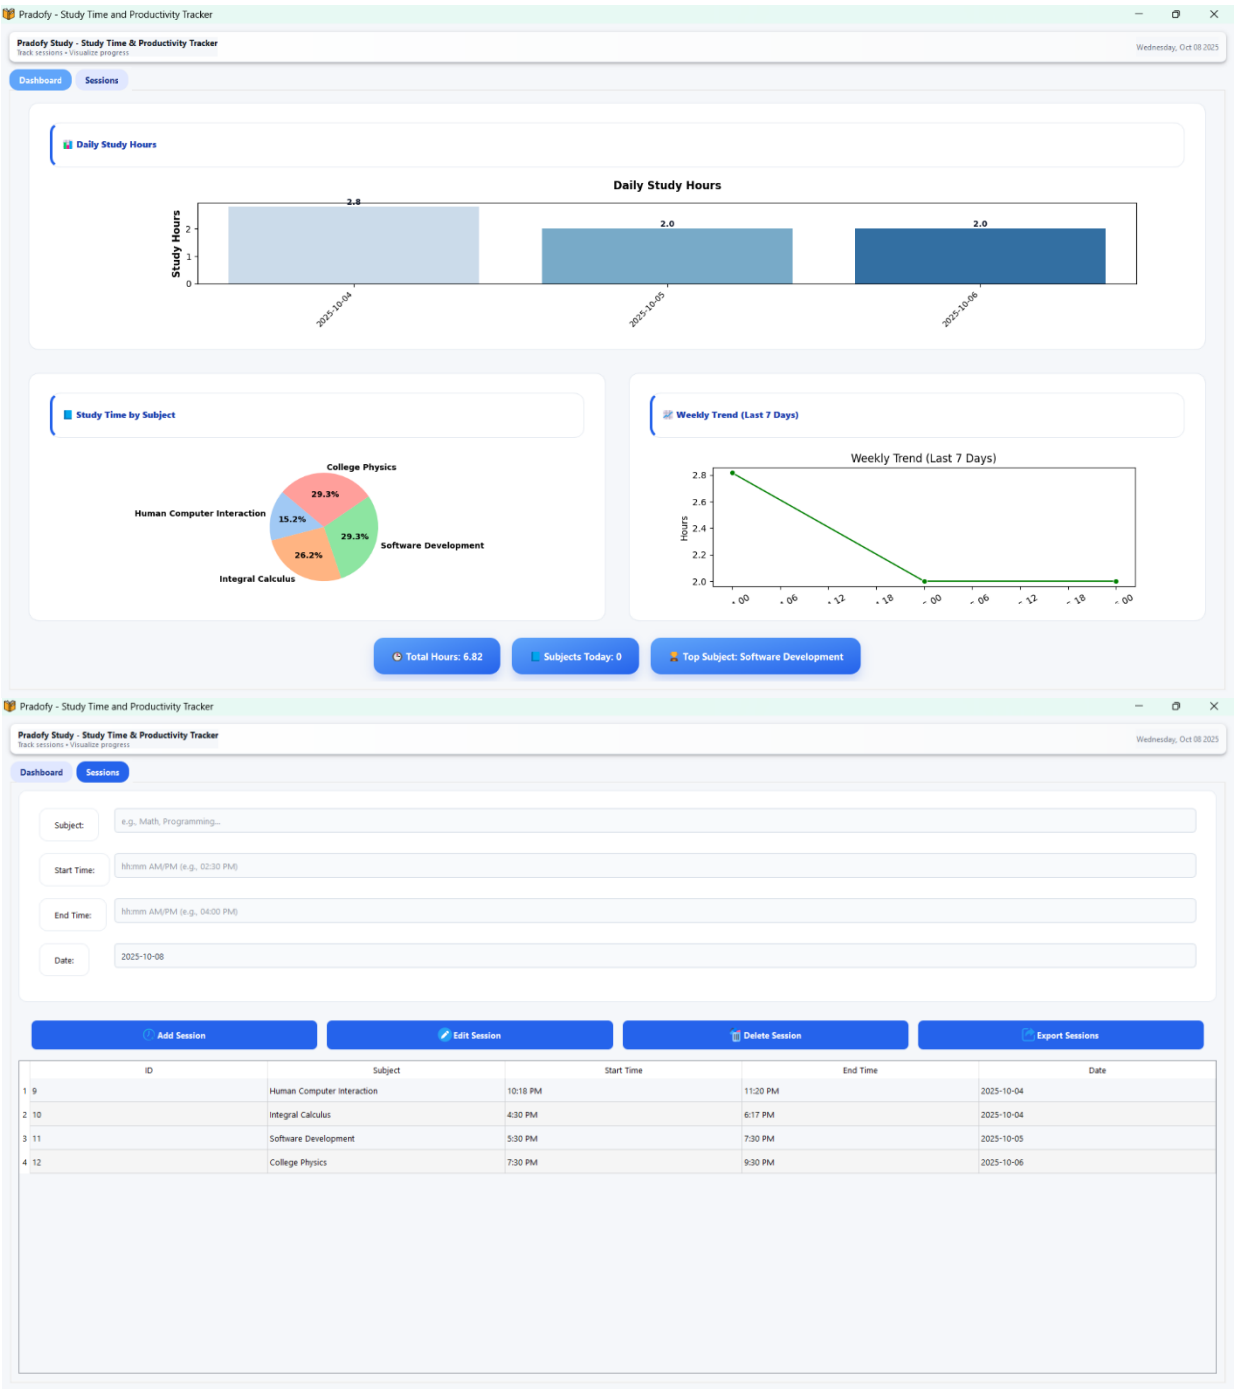

The code is organized with clear function definitions, docstrings, and consistent naming conventions. Comments are included for readability and maintainability, covering database management, UI components, and chart rendering.

How to Run the Program

1. ****Ensure you have Python 3.x installed.****
You can verify this by running:
`python --version`

```

    \ \ \

2. **Install the required dependencies** using pip:
   \ \ \
   pip install pyqt5 matplotlib seaborn pandas
   \ \ \

3. **Download or clone the project folder.**

4. **Open a terminal or IDE** in the project directory.

5. **Run the program** using:
   \ \ \
   python FinalStudyAndProductivityTracker.py
   \ \ \

6. The GUI window will open – start logging your study sessions!
